

MESH-INJURED WOMEN SUPPORT GROUP

Facilitated Support Group for Mesh Injured Women

The WA Pelvic Mesh Support Group (WAPMSG) is a Group developed by Australian women who have had mesh implant surgery to treat stress urinary incontinence and/or pelvic organ prolapse.

For these women, the complications of their treatment are serious and life-changing. Ongoing anxiety, trauma, managing persistent pelvic pain and the many impacts on daily life are just some of the challenges these women face.

This group has been convened to provide a safe space for women to share their experiences and strategies for survival.

For further details please visit the WA Pelvic Mesh Awareness website:
www.wameshawareness.org

Partnership project with the Health Consumers' Council (WA) Inc.
